Campus Marketplace — Video Demonstration Guide

Department of Computer Science • University of Jaffna | Emerging Trends (CSC2023)

Single Voiceover • 5-6 Minutes

🎥 Team Members & Responsibilities

Member Name	Reg No	GitHub Username	Implemented Feature
Sanjeewa I.A.	2023/CSC/067	@SanjeewaIA	**Team Leader** • Seller Dashboard & Analytics
Anuththara Kulathunga	2023/CSC/XXX	@AnnKulathunga	Form Validation & Device Image Picker
Yasitha Rukshan	2023/CSC/XXX	@YasithaRukshan55	Explore Sorting Filters & Listing CRUD (Edit/Delete)
Sahan Dasanayaka	2023/CSC/XXX	@Sahan-Dasanayaka	Buyer/Seller Messaging & Campus Meetup Chat
Kavindi Heshara	2023/CSC/XXX	@Kavindi-hesh	"Mark as Sold" Status Management & Visual Badging

🎬 Step-by-Step Video Script & Action Plan

Part 1: Introduction & Problem Statement

0:00 – 0:50

> **Screen Action:** Display a PowerPoint Slide showing the Project Title, Department of Computer Science, University of Jaffna, and table of all 5 team members.

"Good day everyone. We are presenting our final group assignment for the Emerging Trends in Computer Science (CSC2023) course unit at the Department of Computer Science, University of Jaffna.

Our project is the **Campus Marketplace** application. Within a university environment, students frequently need an affordable, safe, and trusted platform to buy, sell, or exchange items like textbooks, lab tools, and electronics.

Our team consists of 5 members: **Sanjeewa, Kavindi Heshara, Sahan, Anuththara, and Yasitha**. Each member took ownership of designing and implementing a dedicated feature to enhance this platform. Let's walk through the live demonstration of these completed features."

Part 2.1: Listing Form Validation & Image Picker (Anuththara's Feature)

0:50 – 1:35

> **Screen Action:** Switch to App (Mobile View). Click "+ Sell" button. Click "Publish" while empty to trigger inline red validation errors. Fill in Title ("Organic Chemistry Textbook"), Price ("2500"), and Description. Click "Pick an Image", select a photo from files, show the image preview, and tap "Publish listing".

"Starting with the listing creation flow, **implemented by Anuththara Kulathunga**. She added comprehensive real-time validation and device image upload support.

If a user tries to submit without filling required fields, immediate validation warnings prevent invalid postings. Once valid data is entered, students can pick a real photo from their phone storage with an instant preview before publishing it to the marketplace."

Part 2.2: Explore Sorting & Listing CRUD (Yasitha's Feature)

1:35 – 2:20

> **Screen Action:** Go to Explore page. Tap through Sort Bar chips: "Price: Low to High", "Price: High to Low", and "Newest". In search bar, type "Chemistry" to filter the new item. Then navigate to "My Listings", click "Edit" on the card to adjust price, and show the "Delete" confirmation prompt.

"Next is the Explore Sorting and Listing Management system, **implemented by Yasitha Rukshan**.

On the Explore page, students can dynamically sort items by newest arrivals or price thresholds. Furthermore, under 'My Listings', sellers have full CRUD control with dedicated Edit and Delete options to easily manage and update their active listings."

Part 2.3: Buyer/Seller Messaging & Campus Meetup Chat (Sahan's Feature)

2:20 – 3:15

> **Screen Action:** From Explore, click on an item (e.g. "Calculus textbook"), and tap "Message Seller". Point to the persistent Context Banner at the top (Photo, Price, Campus location). Click the Quick Reply chip: "Can we meet at the Main Library?". Wait 1.5s for the seller's realistic reply to pop up. Send a custom message: "Thank you, see you at 3 PM!". Tap "← Inbox" to show chat history.

"Now let's examine the interactive messaging system, **implemented by Sahan Dasanayaka**.

Clicking 'Message Seller' opens a live conversation with an item context banner showing the photo, price, and campus location. To prioritize campus safety, Sahan implemented one-tap Quick Reply chips like 'Can we meet at the Main Library?'.

As demonstrated, the seller immediately responds confirming the campus meetup spot! Users can also send custom messages and view all active conversations from their Inbox."

Part 2.4: Seller Dashboard & Analytics (Sanjeewa's Feature)

3:15 – 3:55

> **Screen Action:** Tap "Dashboard" in the bottom navigation. Show the 4 metric cards: Total Revenue Earned (LKR), Total Inventory Value, Active Listings, Items Sold. Highlight the category distribution list below.

"Moving to the Seller Dashboard, **implemented by our team leader, Sanjeewa**.

This screen gives student sellers a clear summary of their campus sales performance. It dynamically calculates Total Revenue Earned in Sri Lankan Rupees, total inventory value, and active versus sold listings, alongside a clear inventory distribution by category."

Part 2.5: Mark as Sold Status Management (Kavindi Heshara's Feature)

3:55 – 4:30

> **Screen Action:** Open an item detail modal. Tap "✓ Mark as Sold". Show the high-visibility "SOLD" red badge appearing. Point out that the "Contact Seller" button is now disabled. Back on Explore, show that the item card also carries the "SOLD" badge.

"Finally, we have the 'Mark as Sold' status system, **implemented by Kavindi Heshara**.

Once a transaction is completed, the seller toggles the status to 'Sold'. High-visibility 'SOLD' badges appear instantly across both the card and detail views, and the contact action is automatically disabled to avoid unnecessary buyer inquiries."

Part 3: Technical Overview

4:30 – 5:00

> **Screen Action:** Show VS Code briefly (project structure in explorer: src/pages, src/components).

"Technically, the project was developed using **React Native with Expo SDK 57**, written in **TypeScript** under strict type-checking. Data is powered by Cloud Firestore with seamless offline demo fallbacks, and native media access is handled via `expo-image-picker`."

Part 4: GitHub Collaboration Walkthrough

5:00 – 5:45

> **Screen Action:** Open browser at https://github.com/SanjeewaIA/campus-marketplace. Click branches dropdown to show all 5 feature branches. Click Pull Requests tab to show merged PRs (#1 to #7). Click Insights -> Contributors to show commits.

"Collaboration was managed strictly through GitHub. Each member worked on a dedicated feature branch matching their assigned improvement. All changes were reviewed, approved, and merged into the main branch via formal Pull Requests (PR #1 through #7).

As verified in our repository insights, all 5 members contributed directly to the codebase with meaningful, individual commits."

Part 5: Conclusion

5:45 – 6:00

> **Screen Action:** Return to the introductory title slide.

"That concludes our demonstration. We thank our course lecturer, Mrs. Samantha Tharani Jeyakumar, and the Department of Computer Science, University of Jaffna, for this practical software engineering opportunity. Thank you!"

💡 **Practical Recording & Editing Tips:**

1. **Screen Recording:** Record screen video cleanly using *Windows Game Bar (Win + Alt + R)* or *OBS Studio* at 1080p.
2. **Voice Dubbing:** Import the recorded video into **CapCut Desktop** or **CapCut Mobile**. Use the built-in *Audio > Record* feature to read this script smoothly over the video playback.
3. **Submission:** Export without watermark (1080p) and upload to Google Drive (set to *Anyone with link can view*) or YouTube (set to *Unlisted*).
